- 2,269

2022 Data Summary

Data Highlights (Across CVG Sites):

- 42,559 Contacts with Participants
- 8,995 Risk Assessments

www.cvg.org
CVG has had a longstanding partnership with the Durham County Health Department that has produced strong sites. In 2022, the city expanded the approach to new communities.

Culiacán in northwest Mexico is infamous for severe violence and as the birthplace of “El Chapo.” CVG has assisted partners in adapting the approach to this context. In 2022, the city had record low killings in the target area.

Wichita is in the initial stages -- when CVG works with the city to create an assessment and develop a plan for implementation. The assessment entails examining data on violence, mapping resources, engaging community, and identifying partners.

The Cure Violence Approach

An epidemic-control approach to preventing violence
